

Navitia

The most efficient multimodal, real-time passenger information system on the market.

For who ?

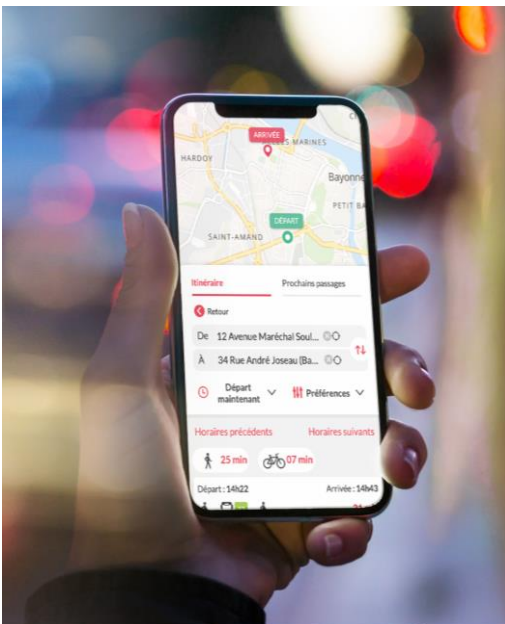

Sustainable Mobility Public Transport Authority, transport operator or integrator

Want to make the most of all mobility data to provide accurate, reliable, real-time information tailored to the needs of travellers?

A solution that meets the needs and challenges of sustainable mobility authorities, transport operators or integrators

What are the benefits ?

- All the mobility of your local region in a single platform!
- Offer your passengers the most relevant routes on the market
- A configurable product that allows you to enhance the transport offer in a way that corresponds with your strategy
- Integrate Passenger Information features quickly and easily with a flexible and modular solution
- Benefit from Kisio Digital's expertise in the field of transport

+11 000

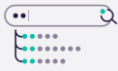

registered users on the Navitia.io platform

+500

500 transport datasets available in open data worldwide

A solution that meets your needs :

Autocomplete API

Improve the user experience while typing searches with Navitia's powerful and comprehensive auto-complete feature. Grouping together by stops, addresses, points of interest or starting point geolocation.

Search API

Help your users and passengers find their way around by geolocating and displaying points of interest around them.

Many POIs are available in Navitia: transport-related (stops, stations) and other public places (shops, hotels, restaurants, etc.)

Passenger Information API

Make it easier to access your local region, your points of sale, or improve the experience of your users by suggesting the best routes, combining public, private and PRM-accessible transport modes.

Display the next public transport departures and arrivals and inform your passengers of any current or future disruptions.

Isochrone API

Use the isochrone feature to calculate the accessibility of a local region on public transport within a given time budget.

Guarantees seamless intermodal mobility for passengers

Navitia brings peace of mind to passengers, facilitating their mobility by providing information adapted to their needs and making their intermodal trips simpler to prepare and carry out, whatever mode they choose: public transport, bicycle, car, walking or new mobility services.

Turning the complexity of transport into easy-to-use information

Navitia addresses the complexity of transport networks by providing simplified, personalised information adapted to the needs of a local region (urban, departmental, regional and national) and future passengers.

A real data hub

Navitia is a leading solution that recovers and aggregates all your multimodal data, making it consistent and disseminating it to the calculation engine: public transport, addresses, points of interest, and new and micro mobility modes, both public and private.

An intermodal, modular route planner

Thanks to Intermob, Navitia has the capacity to use specialised external calculators (real-time car, improved bike, pedestrian PRM, etc.) to optimise the quality of intermodal routes, thereby offering a unique mobility experience as part of MaaS (Mobility as a Service).

An open, interoperable mobility platform

Complete control of public transport

Navitia can integrate all types of public transport data to generate high-quality passenger information services and offers complete data management: theoretical and real-time, disruptions, accessibility and fares.

Complete integration of new mobility services

Navitia's technical architecture enables it to integrate the services of any mobility player, public or private. You can find the following data in Navitia:

- Any type of freefloating service: Bike-share, scooter
- Carsharing service
- On-demand transport
- Private hire cars/Taxis (coming soon)

Distribution adapted to each project

- Are you a developer who needs to access Navitia APIs quickly and easily to add passenger information to your website or mobile app? Navitia is available as open-source and open-service from the website www.navitia.io. Don't waste time, sign up!
- Are you a Sustainable Mobility Public Transport Authority, a transport operator or an integrator who needs a product without installation and maintenance costs while benefiting from regular updates? For this, Navitia is also available in SaaS.
