

Datahub

A SaaS tool that cleanses and transforms mobility data

For who ?

Sustainable Mobility Public Transport Authority, a transport operator or an integrator

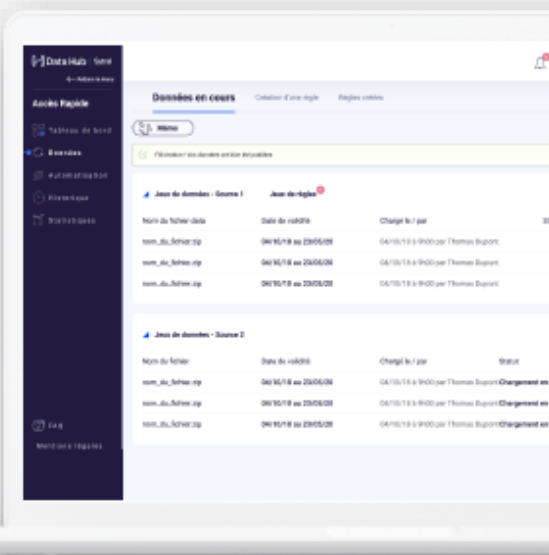

Are you looking for a simple solution to cleanse your data ?

A simple and intuitive interface guarantees the quality of your transport data and the information communicated to your passengers.

What are the benefits?

- A **turnkey SaaS** solution
- An **optimised interface** to help you process your data
- Provide **top-quality data**
- Enhance and promote your transport offer with **qualitative data**

+2200

transport network data sets

680

data sets processed daily

A solution that meets your needs :

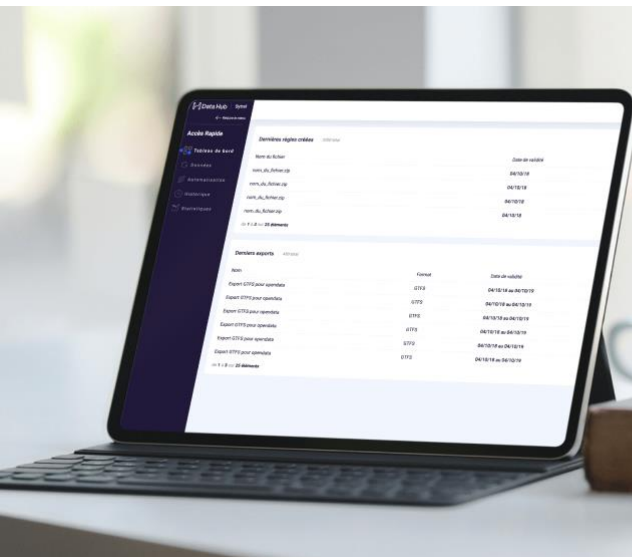

Multiple dataset imports

Import your datasets from one or more different sources, either manually from a simple and intuitive interface or via our import automation system, whatever the format. (GTFS, NeTeX, Neptune, owner, etc.)

Editing and recording

Edit all your imported data by creating data cleansing rules and improve the experience of your users by adding extra information to suggest routes suited to your passengers' needs!

Aggregating data

Merge your mobility data from multiple datasets to create a single dataset that is consistent and usable for passenger information, optimising the journeys of your passengers and their experiences on your media.

Automated conversion and exports

Export your data automatically and regularly, using customised export rules for your chosen target. Choose the desired export format from the market standards (GTFS, NeTeX, Neptune, etc.), create filters on a type of object and define the desired export frequency.

Our data services

Integration support

Quality validation before each integration to check format compliance, reporting errors to the supplier, and continuous monitoring of your data to avoid data gaps.

Expertise

Audit and advice on improving the information in line with your targeted objectives.

Reporting

We offer a dashboard for the regular visualisation of your data.
